

Integrated Energy, Climate and Spatial planning

ABOUT US

The overarching objective of our project is to develop, test, and roll out the **IN-PLAN practice** – a long-lasting support structure enabling local and regional authorities to effectively implement their sustainable energy, climate, and spatial plans. It aims to do so by:

Integrating energy and climate planning with spatial planning

Ensuring commitment at all political levels through vertical integration

Matching the included measures with local and regional budget lines

IN PRACTICE

In its aim to empower the local and regional governments to make their plans energy and climate-friendly with already known tools like spatial planning, IN-PLAN will also implement a **two-step capacity-building programme**:

PHASE 1 : Training the trainers

Empowering energy, climate and/or development agencies from across Europe to become IN-PLAN Multipliers

PHASE 2 : Transferring the knowledge

Passing on the knowledge to local and regional governments, the Replicators. They will be tutored either by the five national project partners or by the trained multipliers.

The IN-PLAN practice will target first:

Lighthouses

15 municipalities, cities, or regions that have been selected to receive both capacity-building training and direct support in the implementation of the IN-PLAN practice from the project partners.

Sweden

Ireland

Romania

Italy

Croatia

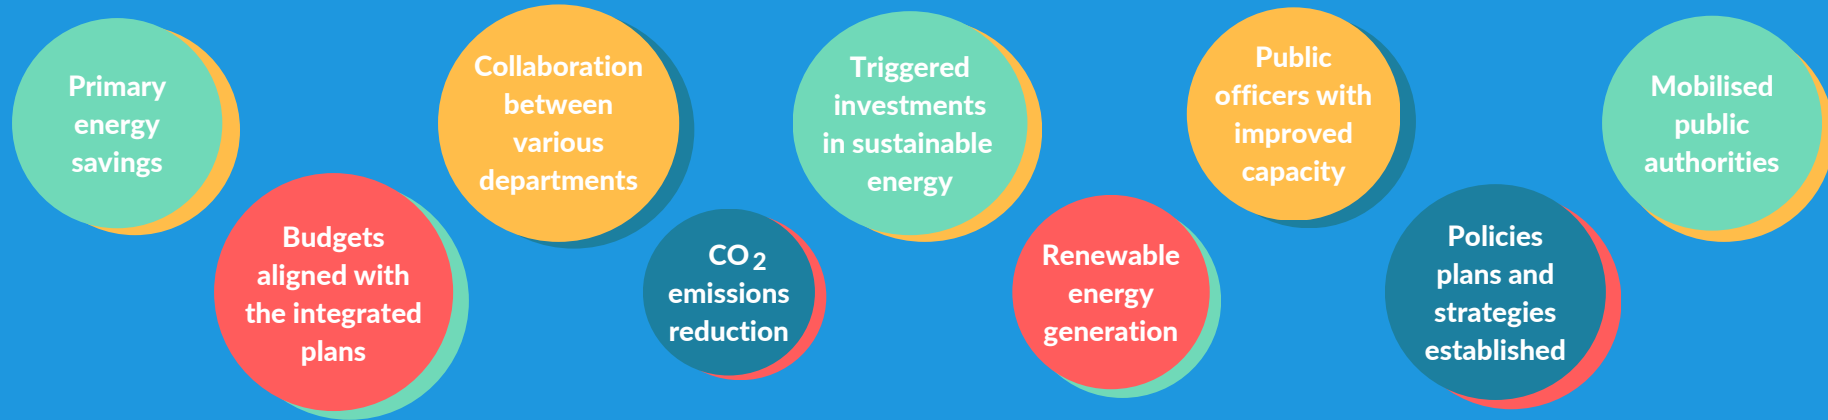

Pilots

30 other municipalities, cities, or regions that will receive capacity building from regional project partners as well as the necessary operational guidelines for the implementation of the IN-PLAN practice.

IN PRACTICE

Integrated Energy, Climate and Spatial planning

IMPACTS

PARTNERS

Are you interested in boosting your plans with the IN-PLAN practice? Scan the code to join the movement, see what role would fit you and apply as a multiplier or a replicator:

The **Multiplier** is an energy, climate, or development agency which will take part in the train-the-trainer workshops and will be able to train Replicators. You can be from the same pilot countries as regional project partners, or from other European countries.

A **Replicator** is a municipality, a city, or a region from not only the EU which will receive capacity building from an IN-PLAN-trained energy, climate, or development agency. You would then initiate the implementation of the IN-PLAN practice yourself or seek external support.
