

The Platform

ENSMOV Plus will maintain and enhance the knowledge platform that enables knowledge and experience sharing on Article 8 EED and related policies.

ENSMOV plus is facilitating:

- Knowledge exchange between partners responsible for policy design, implementation, monitoring, verification and evaluation;
- The aggregation, synthesis, and dissemination of good practices across Member States and beyond.

ENSMOV Plus will map available tools and guidance as well as update and develop new resources based on international best practices in related policy areas.

ENSMOV PLUS

Evaluation, Quantification and Strengthening of the Implementation of the Policies and EM&V under Article 8 of the Energy Efficiency Directive

Co-funded by the European Union under project n°101076098. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or CINEA. Neither the European Union nor the granting authority can be held responsible for them.

ENSMOV Plus supports public authorities and key stakeholders in implementing the Article 8 EED requirements in 12 Member States represented by its consortium!

The activities and resources developed by ENSMOV Plus cover the whole policy cycle:

- Design & implementation
- Monitoring & verification
- Evaluation

The project will deal with both short-term concrete issues and longer-term strategic approaches to improve the effectiveness of energy efficiency policies.

Facilitate and expand experience sharing amongst Member States for the implementation of policies under Art.8 EED through tailored policy support and in-depth exchange of experience and collaboration among key stakeholders.

Develop a suite of tailored resources and tools for the implementation of Article 8 EED to address the specific needs of Member States and stakeholders.

Assist national authorities' in-house EM&V schemes and savings calculation to ensure they have robust data and insight to inform the (re)design of policies towards 2030.

Objectives

A word from our coordinator

“Based on the Commission’s report on the achievement of the 2020 energy efficiency targets, 21 Member States achieved their headline target in terms of final energy consumption not to exceed in 2020. And the EU headline energy efficiency target for 2020 was achieved. But this was partly due to COVID and the resulting lower energy demand.”

“The picture is even more mixed when looking at the Article 7 target about cumulative energy savings over 2014-2020: 14 Member States met their energy savings target, with seven of them overachieving their target by more than 20% (and even sometimes by more than 50%). Whereas ten other Member States did not meet their energy savings obligation, with five of them missing their target by 25% or more. The over-achievements show that doing more is feasible, whereas the under-achievements remind us that not all policies have been successful. Every country and stakeholder can learn from what happened in other countries, provided that experience is analysed and discussed. This is what ENSMOV, and now ENSMOV plus, is doing. In addition to make state-of-the-art knowledge easy to find and acquire, the project provides a unique forum for public bodies and private stakeholders from all EU27 countries to exchange.”

Jean-Sébastien Broc,
Coordinator of ENSMOV Plus at IEECP
