

DOES GENDER IMPACT ENERGY POVERTY?

JUSTEM looks into the Greek regions of Western Macedonia and Arcadia for some answers. **Read the detailed report (with sources) here.**

14,4%

Unemployed women

Despite most women being of working age, female unemployment is high, evidencing a problem of social and racial inequality.

€

16%

High expenditure

Greece is among the EU countries where utility bills take up a higher share of income, meaning that those with lower income are more prone to be energy poor.

5%

Unemployment gender gap

In both regions, women are more affected than men.

Gender inequality is growing

Economic growth is not inclusive and its benefits are not distributed equally between genders.
