

ASSESSING COMPANIES' ENERGY MANAGEMENT MATURITY

The Audit2Action approach identifies the energy-saving potential of companies and provides technical support to aid managers in the adoption of cost-effective strategies.

THE DATA WE GATHERED

A combination of pre-existing databases on energy-saving measures and the insights of energy auditors:

Details of companies

Details of energy-saving measures

Estimated energy and carbon savings

Financial metrics

Perceived non-energy benefits

organised into different industrial sectors:

Food

Metal

Chemicals

Plastics

Machinery

Pharma

Ceramic

Automotive

OUR KEY PERFORMANCE INDICATORS (KPIs)

Consistent comparison across contexts is ensured by a framework that considers **energy savings**, **environmental impact**, **economic feasibility**, and **perceived non-energy benefits** of each measure.

INSIDE THE DATABASE

- **User-friendly interface:** with filters to facilitate search.
- **Comprehensive information:** to support well-informed decisions.
- **Visual analytics:** to facilitate comparison.
- **Technology stack:** for a seamless user experience.
- **Executive sheets:** for easier assessment of measures.
- **Importing feature:** to accommodate ongoing audits.
